

Getting the Gemini API Key from Google AI Studio

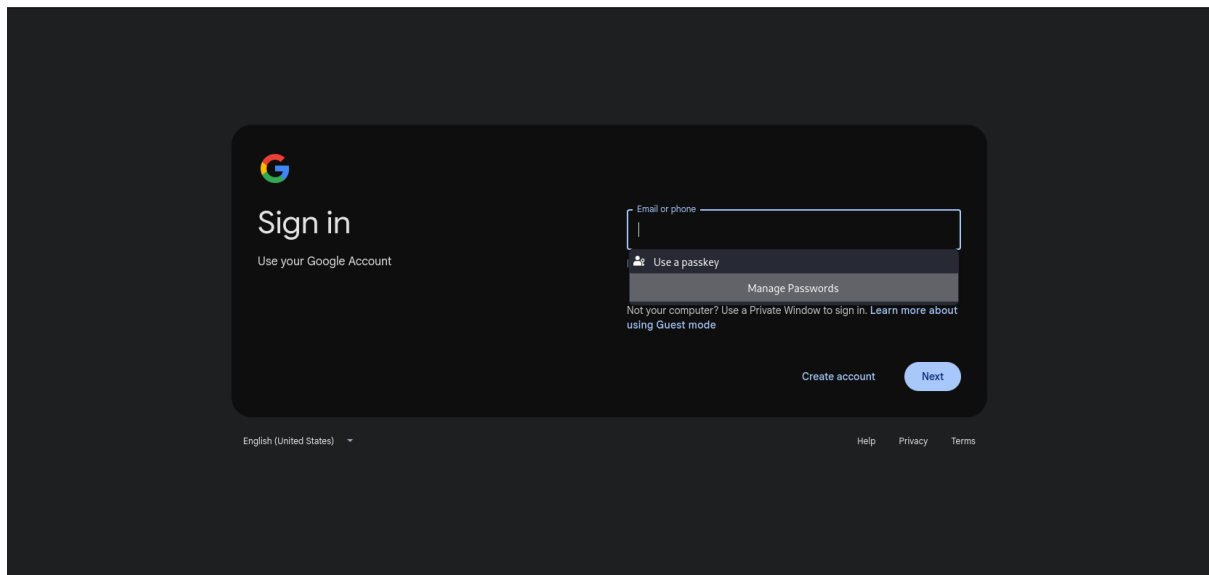

Step 1: Open Google AI Studio in Firefox

Boot into Kali Linux and open the Firefox browser from the taskbar. In the address bar, type `https://aistudio.google.com` and press Enter. You will land on the Google AI Studio welcome page titled "Build with Google AI Studio".

Step 2: Click "Get started"

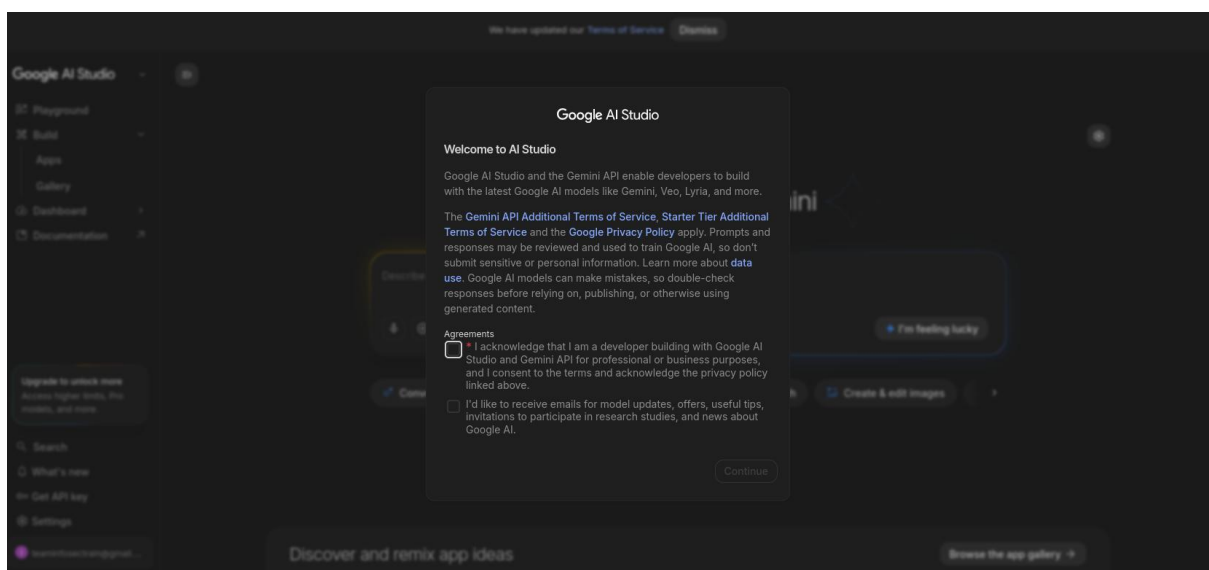

On the welcome page, locate the blue "Get started" button. There are two of them visible — one in the top-right corner of the page header, and another in the centered card near the bottom of the screen. Click either one to proceed. You will be redirected to the Google sign-in page (or directly into AI Studio if you are already signed in to a Google account in Firefox).

Step 3: Sign in with your Google Account

You will be taken to the standard Google "Sign in" page titled "Use your Google Account". Enter your Google email address (or phone number) in the "Email or phone" field and click the **Next** button on the bottom right. On the next screen, enter your password and click **Next** again to complete the sign-in. If your Google account has 2-Step Verification enabled, complete the verification prompt on your phone or authenticator app.

If you do not have a Google account yet, click **Create account** at the bottom of this page and follow the prompts before continuing.

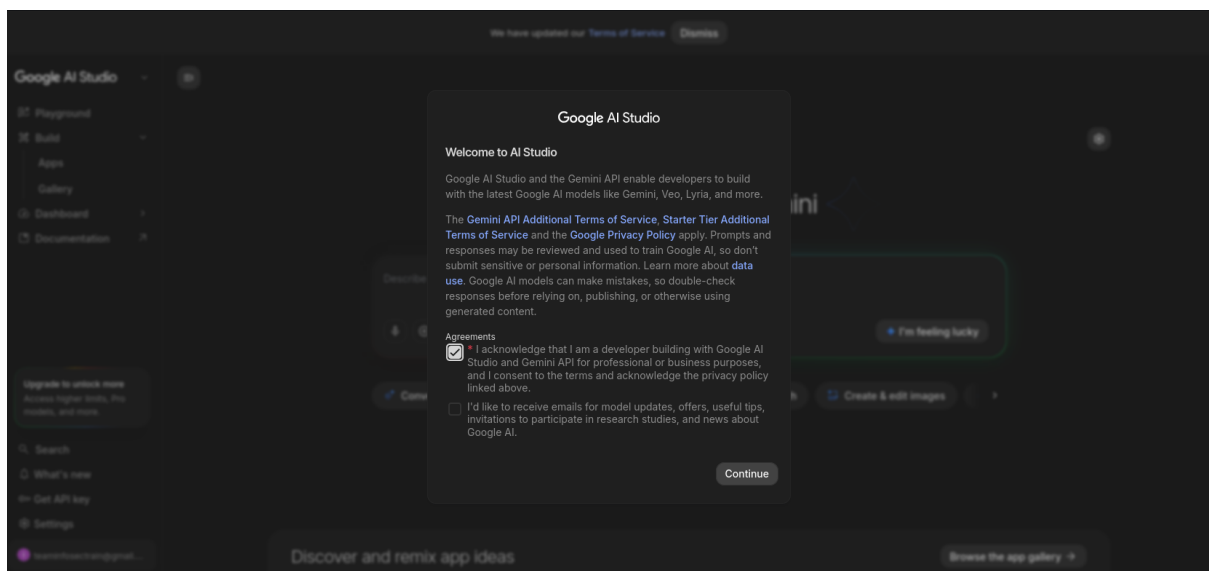

Step 4: Accept the Terms of Service

After signing in, a "Welcome to AI Studio" dialog will appear on top of the AI Studio interface. Read through the notice — it explains that Google AI Studio and the Gemini API are governed by the Gemini API Additional Terms of Service, the Starter Tier Additional Terms of Service, and the Google Privacy Policy. Pay attention to the note that prompts and responses on the free tier may be reviewed and used to train Google AI, so do not submit sensitive or personal information.

Under the "Agreements" section, tick the first checkbox marked with a red asterisk:

"I acknowledge that I am a developer building with Google AI Studio and Gemini API for professional or business purposes, and I consent to the terms and acknowledge the privacy policy linked above."

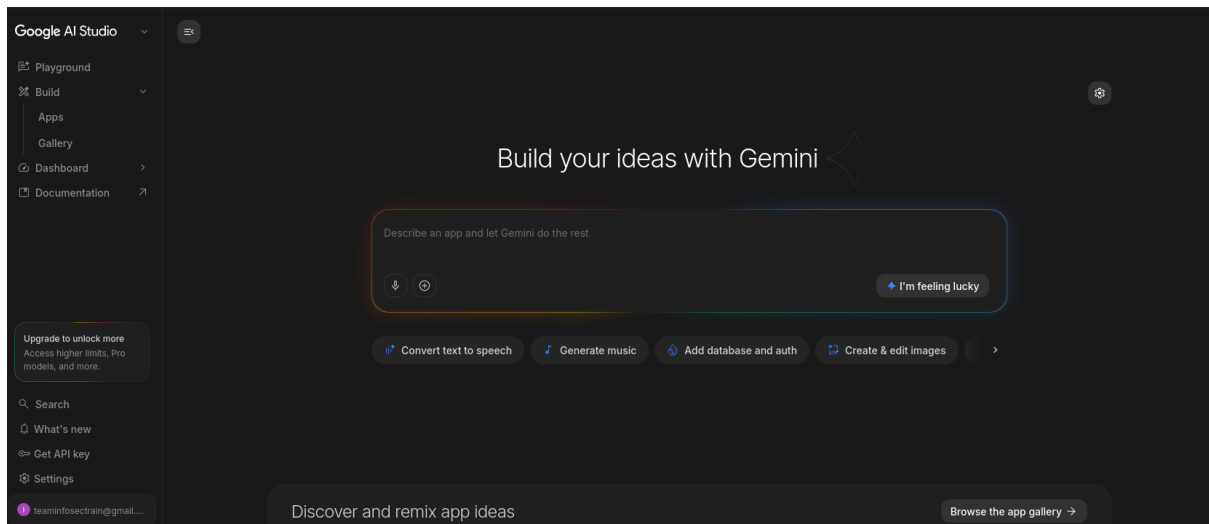

The second checkbox (regarding marketing emails) is optional — leave it unchecked unless you want to receive Google AI emails. Once the required checkbox is ticked, the **Continue** button at the bottom right will become active. Click **Continue**.

Step 5: Open the "Get API key" page

You are now inside the main Google AI Studio dashboard, titled "Build your ideas with Gemini". Look at the left sidebar — towards the bottom you will see a list of options including Search, What's new, **Get API key**, and Settings.

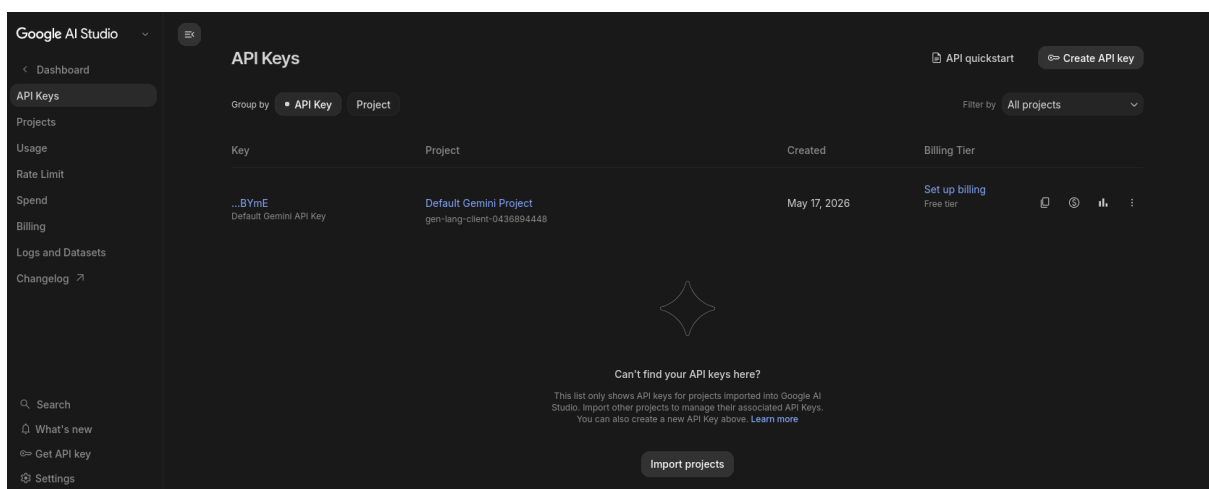

Click on **Get API key**.

Step 6: Create a new API key

You will land on the "API Keys" page. The left sidebar now shows options like API Keys, Projects, Usage, Rate Limit, Spend, Billing, Logs and Datasets, and Changelog. Your account may already show an auto-generated default key in the table — you can ignore that.

To create a fresh API key for use with Open WebUI, click the **+ Create API key** button in the top-right corner of the page.

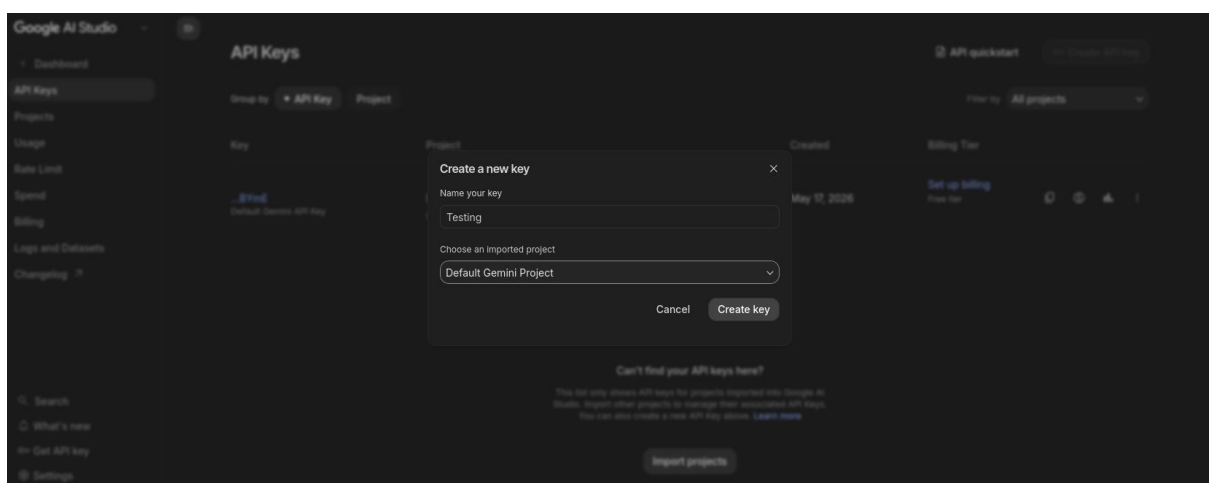

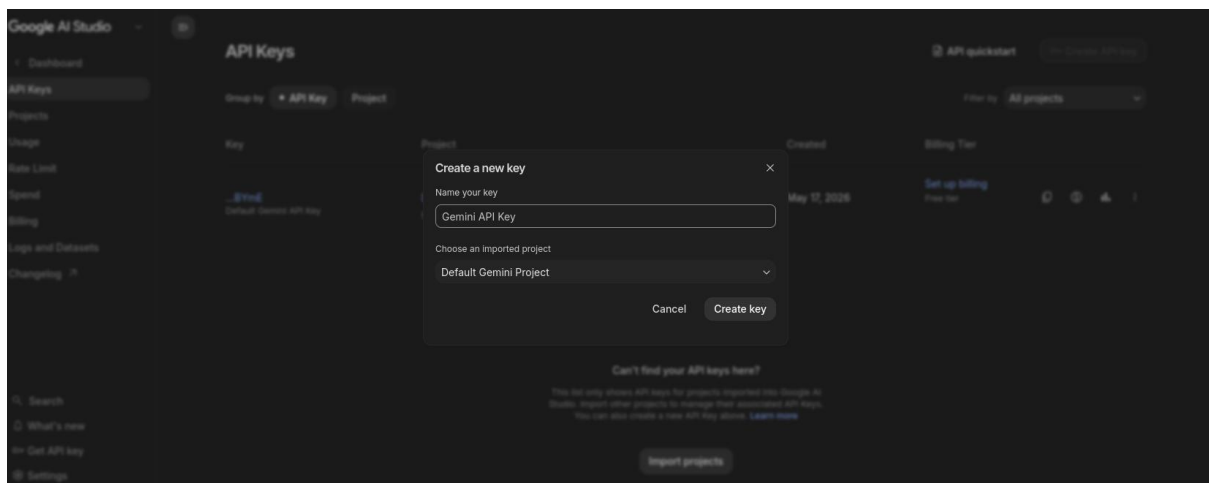

Step 7: Name your key and create it

A "Create a new key" dialog will appear in the centre of the page. It has two fields:

- **Name your key** — this field is pre-filled with the default text "Gemini API Key". You can leave it as is, or replace it with a descriptive name such as Open WebUI Lab Key so it is easy to identify later or simply name it as "test".
- **Choose an imported project** — leave this set to the default "Default Gemini Project" from the dropdown. (This is the project your free-tier usage will be tracked under.)

Once the name is set, click the **Create key** button at the bottom right of the dialog.

Step 8: Copy and securely save your API key

An "API key details" dialog will appear showing:

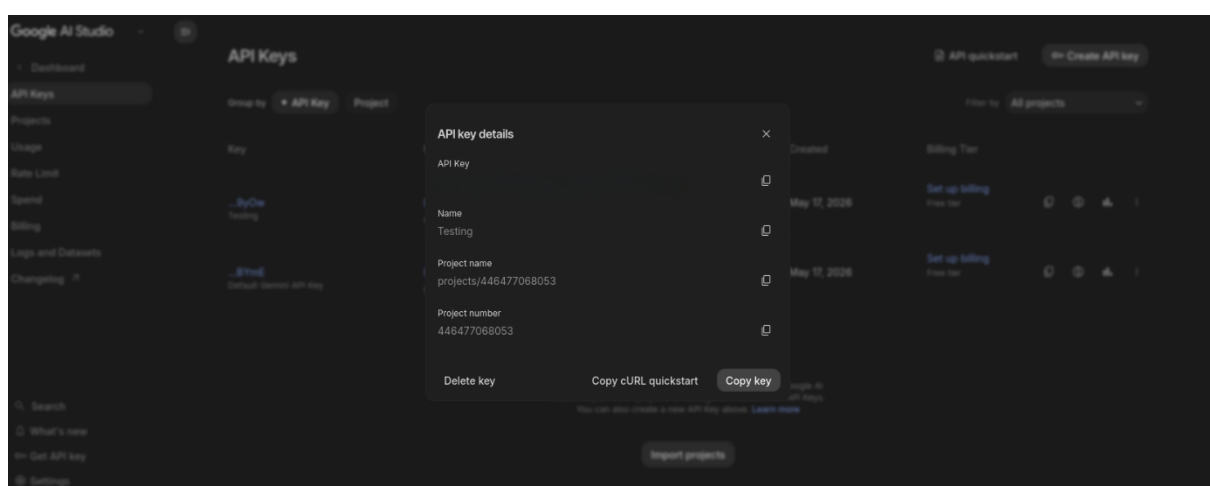

- **API Key** — the actual secret key string (your unique credential)
- **Name** — the name you set in the previous step
- **Project name** — the Google Cloud project this key belongs to
- **Project number** — the numeric ID of that project

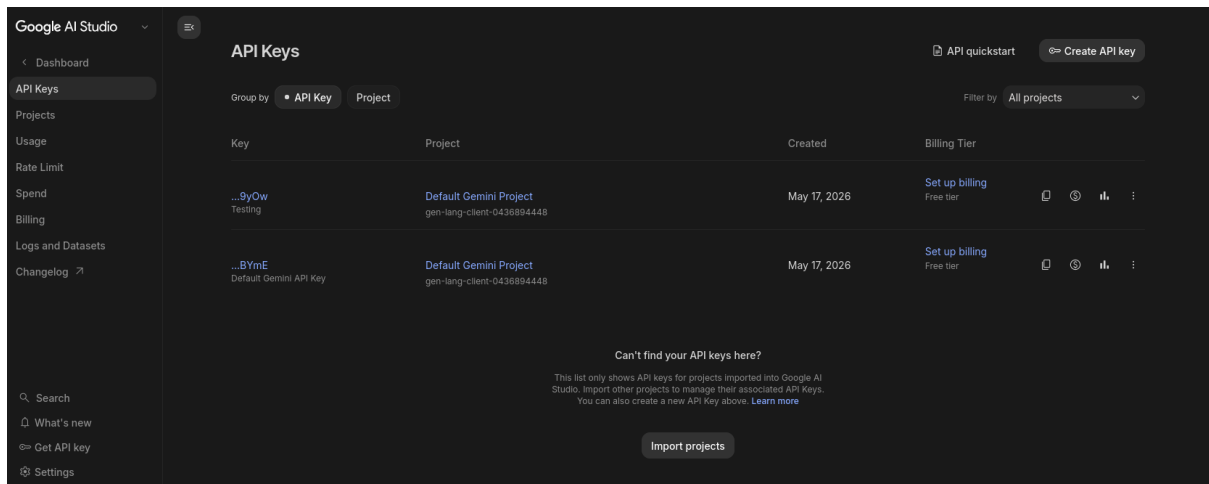

Click the **Copy key** button at the bottom right of the dialog (or the small copy icon next to the API Key field). The key is now in your clipboard.

Immediately paste it into a safe place — a password manager, an encrypted note, or a text file you control. You will need it in the next stage of the lab when configuring Open WebUI. Treat this key like a password:

- Anyone with this key can use your Gemini quota and (if you ever enable billing) spend money on your account.
- Never paste it into chats, screenshots, public repos, or shared documents.
- If you ever expose it accidentally, return to this page and click **Delete key** to revoke it, then create a new one.

Once you have saved the key, click the **X** in the top-right corner of the dialog to close it. You can now close the Google AI Studio browser tab

That completes the "Get your Gemini API key" walkthrough. The next walkthrough will be **configuring Open WebUI to use this key** so Gemini models appear alongside the local Ollama models.
